KLAUDIA GOŁĘBIOWSKA

PRODUCT MANAGER | SYSTEM DESIGNER | SYSTEM BUSINESS ANALYST

RESULT OF THE LAST TWO YEARS OF WORK

I developed a web application for managing benefits for families, which receives applications from various channels, analyzes them, and automatically grants or denies rights, while creating tasks for ZUS employees to handle manual tasks. Our software was based on the largest database in Poland, and its automation reached 99-95% in cases where 10 million applications were submitted.

During the project, I designed the Camunda process for automated app handling, created interfaces, and developed application logic that integrated data from the PESEL Register, CRI, CRU, Border Guard, and Custody Services. I also developed system for receiving applications using Figma, designed interfaces, wrote backend projects and services, which were then implemented by Java developers. I tested the application manually and using tools like Postman, SoupUI, and DBeaver.

I created tasks for a team of 10 people, managed modifications, and coordinated work on the product for approximately 100 people.

I supported the release process, created user and administrator documentation, and fixed bugs.
